Dialed In Hiring Team

Re: Video Editor UGC Ads, Short-Form Videos, Creative Graphics

Dear Dialed In Hiring Team,

I am applying for the Video Editor role because the work you described matches the creative production I want to focus on: short-form ads, UGC-style edits, AI-assisted visuals, captions, graphics, fast feedback, and testing different hooks and concepts.

In my current full-time remote role as Social Media Manager for OverwatchMoz, I create content for a security technology brand focused on intelligent CCTV monitoring and virtual guarding. My work includes Reels, short-form video campaigns, branded graphics, carousels, scripts, captions, Portuguese localized content, and campaign messaging.

My AI production workflow is practical and role-relevant. I use ChatGPT for storyline development and image generation, then use Google Flow, Gemini, Higgsfield AI, CapCut, and Magnific Space for generative video, visual concepts, enhancement, final edits, and ad variations.

I can bring Dialed In a dependable creative workflow: hook options, fast rough cuts, clean caption passes, simple graphics, organized revisions, and multiple exports for testing.

Thank you for reviewing my application. My role-specific portfolio is at mejforge.com/portfolio, with additional profile links in the header.

Sincerely,

Ebube Junior Michael
